

## FAQ (Frequently Asked Questions)

**Q: Do the brackets need to be welded on?**

**A:** Yes, one bracket needs to be welded to the combine frame and one gets welded to the feederhouse frame.

**Q: How do they plumb into the existing system?**

**A:** They come with the hose and fitting required to connect into the existing system. There is a "T" fitting that gets installed in one of the existing lines and the extra cylinder gets oil pressure from there.

**Q: Do they interfere with the stone trap?**

**A:** No, all our kits are built to work with the factory stone trap without interfering.

**Q: How hard is it to install?**

**A:** The installation is straight-forward, however, there is some welding required, so the person doing the install needs to be a capable welder. If you are not confident with your welding skills, please call a mobile welder or similar to do this part of the install for you.

**Q: Do I need to purchase anything that does not come with the kit?**

**A:** No, all parts required for install are included in the kit.
